How to read this page

Evidence is from tonight's hackathon material (live listings, 185 sale brochures, Land Registry Price Paid matching, and Dwelly's synthetic cases) or from a document we opened. Assumptions are labelled as such. No market-size, frequency, or willingness-to-pay figures are invented. Wrong or stale material facts in marketing can breach UK consumer-protection rules and the National Trading Standards Estate and Letting Agency Team (NTSELAT) material information guidance that estate and letting agents are expected to follow. That duty is mentioned only in general terms. This page is not legal advice and does not cite clause numbers.

Product and customer

Property facts start in many places — the developer, the architect, the sales agency, the letting agent, the conveyancer, the managing agent, and official registers such as Land Registry and the EPC register — and they change as a development moves from planning to sale to management. The same figure is copied from document to document, often by a different team, and the copies disagree: one brochure says showers, another says baths; one set of particulars says £700,000, a later one says £600,000. This product ingests every available source for a development and for each unit, extracts structured facts with their provenance (document, page, quoted text, date, and author or owner), detects contradictions, applies resolution rules, and requires a human agent to verify anything the
